

Research Associate in Robotic Device Development

Job Ref: REQ170995

As part of the University's ongoing commitment to redeployment, please note that this vacancy may be withdrawn at any stage of the recruitment process if a suitable redeployee is identified.

Applications are invited for a Research Associate position in the Mechanics of Advanced Materials Research Group, Wolfson School of Mechanical, Electrical and Manufacturing Engineering, Loughborough University. The research group (<u>https://moamrg.co.uk/</u>) has an outstanding international reputation in performing multidisciplinary research into the response of advanced engineering materials to various types of external loading and environmental conditions, using a combination of analytical, numerical and experimental techniques. The engineering Schools at Loughborough have outstanding research facilities second to none.

Job Description

Job Grade: Specialist and Supporting Academic Grade 6, fixed term for 9 months

Job Purpose

The project – known as RoboMade - will form one of the integral parts of a collaborative research grant with the industry, which is funded by Innovate UK. The project is a unique collaboration between research organisations and industrial stake holders with the final goal of making an industrially relevant technological breakthrough which is a digitally enabled, robotic solution that will be a key driver for a step change in industrial uptake of robotic machining in the industry.

The aim of the RoboMade project is to exploit a decade of advanced R&D activities in robotics, advanced machining and automation to develop a novel hybrid ultrasonic assisted robotic machining system. RoboMade will offer a low-cost and accessible solution, delivering high-value, to meet the ever-increasing demand from customers for precision machining of exotic materials, associated with significant capital and operational cost savings. The digital infrastructure underpinning the system will provide users major benefits related to flexibility, configurability and autonomous operations. The primary market is the advanced machining within High Value Manufacturing sectors, including but not limited to aerospace, defence, automotive, power-generation and medical. This specifically relates to machining of new generation materials (composites, intermetallics, ceramics) and dry machining of aluminium (mainly in aerospace and automotive).

The Research Associate will be responsible for designing and developing an appropriate ultrasonic transducer/spindle for a robotic drilling arm. It is envisaged that some knowledge of controls is desirable to acieve the project objectives. The Research Associate will be working as part of a multi-disciplinary team to manage and deliver the project.

Job Duties

Research

The work entails, primarily, the following activities under the direction and supervision of Dr Anish Roy:

- To design, develop and manufacture/assemble an ultrasonically assisted drilling spindle for deployment in a robot
- To perform testing of the designed spindle based on specifications and calibrate parameters.
- To plan, manage and conduct the work to agreed deadlines.
- To carry out literature reviews, to write up technical reports and technical papers for publication of the results obtained and the generation of research posters and other publicity media.

- To work as part of a team
- To assist in other related engineering research projects as required.
- To assist in developing new lines of research and the writing of research proposals.
- To maintain confidentiality where appropriate and to ensure that intellectual property (IP) agreements are met.
- To identify and report new opportunities for IP generation.
- Where necessary, to spend short periods of time travelling in the UK.

Teaching

Teaching is not the primary purpose of this post and teaching load will be small relative to the typical load of a member of academic staff in the School, but the Research Associates will be expected to contribute to taught programmes and student projects, at any level, if appropriate and if requested to do so.

Other Related Activities and Functions

- To engage in training programmes in the University (e.g. through Professional Development) and elsewhere as required.
- To undertake such other duties as may be reasonably requested and that are commensurate with the nature and grade of the post.

Points to Note

The purpose of this job description is to indicate the general level of duties and responsibility of the post. The detailed duties may vary from time to time without changing the general character or level of responsibility entailed.

Special Conditions

All staff have a statutory responsibility to take reasonable care of themselves, others and the environment and to prevent harm by their acts or omissions. All staff are therefore required to adhere to the University's Health, Safety and Environmental Policy & Procedures.

All staff should hold a duty and commitment to observing the University's Equality & Diversity policy and procedures at all times. Duties must be carried out in accordance with relevant Equality & Diversity legislation and University policies/procedures.

Successful completion of probation will be dependent on attendance at the University's mandatory courses which include Respecting Diversity and, where appropriate, Recruitment and Selection.

Organisational Responsibility

Reports to the project investigators named above.

Person Specification

Your application will be reviewed with respect to meeting the essential and desirable criteria listed below. Your application will be reviewed against the essential and desirable criteria listed below. Applicants are strongly advised to explicitly state and evidence how they meet each of the essential (and desirable) criteria in their application. Stages of assessment are as follows:

- 1 Application
- 2 Telephone interview/Assessment Centre/Presentation
- 3 Interview

Essential Criteria

Area	Criteria	Stage
Experience	The conducting of original research that can be, or has been, published in high quality journals	1, 3
	Good understanding of instrument design	1, 3
	Some knowledge of machine controls	1, 3
	Competent IT/ Internet user	1, 3
Skills and abilities	Demonstration of excellent technical ability	1, 2, 3
	Excellent inter-personal and communication skills - both written and oral.	3
	Able to manufacture and assemble components	1, 3
	Highly-motivated with the ability to set and meet deadlines appropriate to the progress of the project	1, 3
Training	A willingness to undertake further training as appropriate and to adopt new procedures as and when required	3
Qualifications	A good honours degree in mechanical/instrumentation/electrical engineering, or other relevant subject	1
	 A relevant PhD degree (or approaching the completion of a PhD degree) in any one of the following areas: 1. Instrumentation 2. Engineering/Physical Sciences 3. relevant subjects 	1,3
Other	Ability to work on own initiative and as part of a team	3
	Commitment to observing the University's Equal Opportunities policy at all times	3

Desirable Criteria

Area	Criteria	Stage
Experience	Post-doctoral research in Engineering or equivalent experience	1, 3
	Knowledge of ultrasonic transducers	1, 3
Skills and abilities	Track record in originating and developing new ideas	1, 3
	Experimentation	1,3
	Knowledge/Experience of metal-matrix composites	1,3
	Public engagement	1, 2, 3

Conditions of Service

This position is full time and fixed term for 9 months. Salary will be on Specialist and Supporting Academic Grade 6 (£29,799 - £36,613 per annum), at a starting salary commensurate with experience and qualifications and to be confirmed on offer of appointment.

The appointment will be subject to the University's normal Terms and Conditions of Employment for Academic and Related staff, details of which can be found <u>here</u>.

The University is committed to enabling staff to maintain a healthy work-home balance and has a number of family-friendly policies which are available at http://www.lboro.ac.uk/services/hr/a-z/family-leave-policy-and-procedure---page.html.

We also offer an on-campus nursery with subsidised places, subsidised places at local holiday clubs and a childcare voucher scheme (further details are available at: <u>http://www.lboro.ac.uk/services/hr/a-z/childcare-information---page.html</u>

In addition, the University is supportive, wherever possible, of flexible working arrangements. We also strive to create a culture that supports equality and celebrates diversity throughout the campus. The University holds a Bronze Athena SWAN award which recognises the importance of support for women at all stages of their academic career. For further information on Athena SWAN see <u>http://www.lboro.ac.uk/services/hr/athena-swan/</u>

Informal Enquiries

Informal enquiries should be made to Dr Anish Roy, Reader in Mechanics of Materials and Processes, Wolfson School of Mechanical, Electrical and Manufacturing Engineering by email at <u>A.Roy3@lboro.ac.uk</u> or by telephone on +44 (0)1509 227637.

Applications

The closing date for receipt of applications is 13 November 2017.

Interviews will take place two weeks after the closing date. Expected start date Early January 2018.
